

Applications of Zemax in Fiber Optic Sensors

Overview

Articles in this section are multi-part guides which provide insight into using Ansys Zemax OpticStudio for specific real-world applications. In the optical fiber sensor, the signal light output from the silica fiber is transmitted to the detector, which usually needs to be coupled through the lens focusing. However, this often destroys the compactness and flexibility of the optical fiber sensor system structure. This process plays a critical role across industries, from powering the backbone of telecommunications networks to enabling advanced medical imaging. This project focused on designing the objective part of a fiber bundle endoscope using Zemax for optical path tracing. The design process involved extensive literature review, with a particular paper providing the necessary parameters for the design.

Applications of Zemax in Fiber Optic Sensors

This technique is crucial in many applications, including telecommunications, medical devices, industrial manufacturing, and scientific research, where lasers are used for transmitting ...

This design revealed best practices for correctly modeling sources, coatings, and sensor type in OpticStudio's non-sequential mode that will be beneficial in future designs.

Aiming at the precise coupling problem of the optical fiber collimator lens signal, one of the core components of the optical fiber connector, a single-mode large beam optical fiber...

The simulation results lay the foundation for the integrated design of OFP sensors and the optimization of their internal optics. The findings could also be applied to OFPs with multiple...

Tutorials & Applications Articles in this section are multi-part guides which provide insight into using Ansys Zemax OpticStudio for specific real-world applications.

This project focused on designing the objective part of a fiber bundle endoscope using Zemax for optical path tracing. The design process involved extensive literature review, with a particular paper ...

This approach provides a clearer understanding of interferometer performance and enhances the accuracy of optical metrology, offering valuable insights for both theoretical modeling ...

The simulation based on ZEMAX verifies the application feasibility of this hydrogel fiber lens, which is expected to realize the integration of optical fiber sensor structure and has the potential to be applied ...
