

Are distribution boxes safe and durable

Overview

Plastic distribution boxes are not only lightweight and safe, but they are also incredibly durable. They are designed to contain internal explosions and prevent ignition of surrounding flammable gases or dust. In this article, we will explore three key aspects: Metal distribution boxes, made from galvanized steel, stainless steel, or aluminum alloys, offer superior mechanical strength, fire resistance, thermal stability, excellent heat dissipation, grounding capability, and electromagnetic interference shielding. Made from durable materials like galvanized steel, they provide excellent corrosion resistance, mechanical strength, and long service life for both. An electrical distribution box serves as the vital physical barrier housing sensitive protective devices. The enclosure serves a critical dual purpose in every modern power network globally.
