

Certified Carrier-Grade Router PAM4

Overview

With its high efficiency, 50 Gbps/lane (50G for short) PAM4 has been chosen by IEEE 802.3 as the encoding technology at the physical layer for 400GE, 200GE, and 50GE interfaces. Pulse amplitude modulation (PAM) is already a widely adopted technology in high-speed digital communications. But to understand why it has become ubiquitous in serial data standards, you first must understand the market forces driving the data networking industry. Figure 1-1 shows the typical waveform.
