

# Classification of Fiber Optic Cables for Smart Buildings

## Overview

This article explains the core differences between OS1 and OS2 singlemode fibers, as well as OM3, OM4, and OM5 multimode fibers—to help OEM clients, installers, and data center engineers make informed decisions. In high-speed network infrastructure, choosing the right type of fiber optic cable is essential for performance, cost-efficiency, and long-term scalability. Transmits multiple light modes; higher dispersion; best for shorter distances. Multi-mode fibers are further divided. Fiber optic technology supports the infrastructure that keeps smart buildings, data centers, and high-speed networks running smoothly.
