Communication towers in the 1950s

Overview

Between early wired networks and today's fiber optics sat a system of microwave relay towers transmitting information from coast to coast across the United States. Built in the early 1950s, this line-of-sight network spanned the continent using zig-zag patterns to avoid signal. Radio masts and towers are typically tall structures designed to support antennas for telecommunications and broadcasting, including television. There are two main types: guyed and self-supporting structures. Masts are often named after the. European communications towers built between 1956 and 1968 combined bold architecture with specialized elevator engineering to overcome spatial constraints, severe environmental exposure and significant sway. <update> Terry Lee posted three photos with the comment: "I've been looking at this 1950's AT&T Long Lines Microwave. Telecommunication Tower of US-Forces Heidelberg is an 80 metre tall telecommunication tower of the US Army in Europe on the mountain Königsstuhl, which is part of the City of Heidelberg at 49°24′8″N 8°43′59″E / 49. The Telecommunication Tower of US-Army in Europe is one of the. Exactly, part of the AT&T long lines system which was originally built starting in the 1950s. Unfortunately he passed away before I was old
