

Do I need a router if I have fiber optic cable installed

Overview

Yes, fiber internet requires specific equipment including an Optical Network Terminal (ONT) and a compatible router. The ONT converts fiber-optic light signals into electrical signals your devices can use. Do I Need a Special Router for Fiber Optic Internet?

You don't need a special router, per se, but you do need one that can handle the speed fiber provides. If you're paying for gigabit fiber service, make sure your router supports at least gigabit Ethernet ports and dual-band or tri-band WiFi (like). You cannot replace the ISP-provided ONT with a traditional cable modem, but you can connect almost any wireless router for fiber internet to the ONT's Ethernet port. Now for the technical part: The traditional modem is a "modulator demodulator" that translates signals from one device to another.

Do I need a router if I have fiber optic cable installed

In contrast to the modem situation, any router can work with a fiber connection. That's no exaggeration, either—if it has an Ethernet port (and nearly every modern router does), you can ...

The short answer is no, you don't necessarily need a special router for fiber optic internet. However, having a router that is optimized for fiber optic internet can make a big difference ...

Do I need special equipment for fiber internet installation? Yes, fiber internet requires specific equipment including an Optical Network Terminal (ONT) and a compatible router.

Discover the essential equipment needed for fiber-optic internet, including modems, routers, Ethernet cables and more. Learn how to optimize your setup.

You still need a router: The ONT converts the fiber signal but doesn't distribute Wi-Fi. You need a router connected to the ONT to get wireless coverage throughout your home — either a ...

To enjoy the full benefits of fiber, you'll need to connect your ONT to a fiber internet router. The router is what broadcasts your internet signal to the rest of the home via WiFi.

For best results, choose a router that supports gigabit or multi-gigabit speeds and modern standards like Wi-Fi 6 (802.11ax) or newer. Installing the router in a centrally located position within ...

Most fiber ISPs, including Mercury, provide an ONT that connects directly to your router via an Ethernet cable. This means you don't need a specialized modem-router device, but your ...

The good news: Fiber-optic internet does not require a special router in most cases. Since the ONT handles the signal conversion, you can use virtually any quality router that supports ...

You don't need a special router, per se, but you do need one that can handle the speed fiber provides. If you're paying for gigabit fiber service, make sure your router supports at least ...
