

Dpi aggregation switch

Overview

With AXIS D8308 Fiber Aggregation Switch you can connect multiple Axis devices using fiber midspans over long distances. An 8-port, Layer 2 switch made for 10G SFP+ connections. Faster replacement and priority support, covered for 5 years. It also enables easy expansion by simply adding more fiber or network. Provides 1G, 2.5G, and 10G speeds for flexible customization, ensuring optimal performance, compatibility, and scalability. Flexible interface options like copper, fiber, and PoE ensure seamless integration and cost-effective deployment. Supports stacking for easier management, improved redundancy. This compact managed Layer 2 switch offers eight 10G SFP+ ports and supports high-bandwidth links, making it ideal for aggregation switching to any UniFi device that deploys various interconnect topologies. 0.4 Mpps forwarding rate. The three layers of a traditional three-layer network design are the core layer, aggregation layer, and access layer. As the physical part of the aggregation layer, aggregation switches typically play a key role. The weapon of choice for service-oriented network monitoring is Deep Packet Inspection (DPI) which are high performance software solutions that run on standard server hardware platforms enabling

providers to 1) identify, classify and even selectively block IP traffic to prevent revenue leakage from.
