Fiber optic pigtailed can be plugged in and unplugged directly

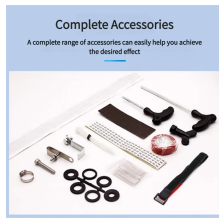

Overview

A fiber optic pigtail is a short, usually unjacketed, optical fiber cable that has a factory-installed connector on one end and a length of exposed fiber at the other. Unlike a patch cord—which has connectors on both ends—the bare fiber end of a pigtail is designed to be permanently spliced (either by fusion or. You can imagine it as the HDMI cable or network cable we commonly use in our daily life - ready to use out of the box, simply plug and unplug to connect devices. Role Positioning: The flexible connector of the "last mile" between devices and between devices and patch panels. During the installation at the point where the fiber cable has to be plugged and/or unplugged you need to switch up your strategy and put a connector of some kind on.
