

Functional Introduction of Fiber Optic Distribution Frames

Overview

An Optical Distribution Frame (ODF) is a dedicated unit designed to organize, terminate, and interconnect fiber optic cables. Whether in data centers, telecom central offices, or enterprise network rooms, ODFs enable efficient fiber management. ODF, also known as optical distribution frame or fiber optic patch panel, is a critical device used in optical communication for managing and distributing optical fibers. They provide efficient fiber optic management, connectivity, and protection.
