RELAY 1 prevents leakage current in Disconnect Mode. SW1 is used to detect SHORT circuit on HV DC Bus. Capacitor is charging thru SW1 that is activated by MCU. When the HV DC Bus is not shorted, ...

This reference design introduces an active precharge circuit which is essentially a buck converter topology to achieve the precharge for high voltage (HV) DC link capacitors.

High voltage relays are electromechanical devices whose purpose is to switch to high voltage signals (> 1kV) and high frequency applications. These relays are heavily insulated and are made of strong ...

With large current transformers, especially those with a low secondary current rating, the voltage may be very high, above a suitable insulation voltage. The voltage can be fixed without detriment to the ...

The relay allows automatic motor bus transfers using fast, in-phase, residual, and fixed-time methods to keep processes running without requiring a cold start. It is also possible to manually transfer load ...
