

How to crush a laser diode circuit

Overview

In this project, we will show how to connect up and build a laser diode circuit. Unlike LED light, a laser's light output is more concentrated, meaning it has a smaller and more narrow viewing angle. A laser diode is a diode which outputs a laser beam. This means it must be directed at its source. In this article, you'll learn the basics of laser diodes and how to use them in your own projects. This circuit features an LDR (Light Dependent).
