

How to cut the concave and convex sections of a cable tray

How to cut the concave and convex sections of a cable tray

In designing supports for a cable tray system, consideration should be given to the loads associated with future cable additions and any additional loading that may be applied to the cable tray system (e.g., ...

Mastering the Art of Drilling Concave Holes: A step-by-step guide will help you learn the techniques and tools needed to drill concave holes with precision. Gain the knowledge necessary to ...

It is an operation that goes a further step when working with parts that need a super smooth profile or a mirror finish. For us to achieve this, we use high-speed finishing methods and ...

The sketches at Fig. 338 show the attachment constructed and applied, and demonstrates how the concave and convex surfaces required were turned. The upper drawing shows the attachment for ...

The document provides instructions for forming various bends and joints in electrical trunking and cable trays. It describes: 1) How to mark and cut a right-angle internal bend in a section of trunking, ...

The document provides instructions for forming various bends and joints in electrical trunking and cable trays. It describes: 1) How to mark and cut a right-angle ...

I'm talking about a drawknife. Drawknives are super efficient for quickly roughing out concave curves and tapers. Once you get the hang of the tool, you can hog out massive curves in a ...

This is an easy way, with hand tools, to cut out concave shapes quickly and easily. Great blue grass music by beanpotmedia...more

I wanted a jig that was simple to construct and could handle both concave and convex parts. Sometimes, jigs for curved parts are ridiculously complicated to build and require multiple ...

I wanted a jig that was simple to construct and could handle both concave and convex parts. Sometimes, jigs for curved ...

Among the possible methods are: using one or more form tools, making a round surfaces by a series of straight cuts, using a ball turning attachment, using linkages to control position of the cross slide.

To achieve a concave profile, you can drill a number of holes close to the outline of the curve or you can cut a V towards the centre of the curve, starting from the two widest points on the curve
