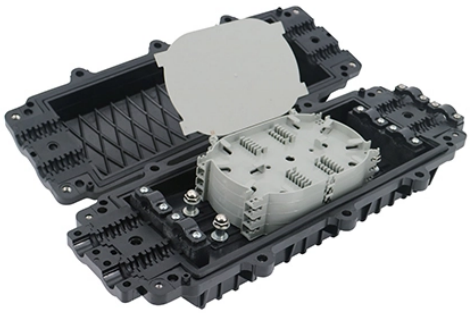
How to distribute fiber optic cables across multiple routers



Overview

Here's a step-by-step guide to help you set up your fiber distribution box seamlessly: Before installing the fiber distribution box, ensure that your optical cables are properly prepared for connection. I'm planning to use a TP-Link MC220L transceiver to convert the optical signal to ethernet. This ethernet will then go through a 1 Gbit/s switch, and rout two ethernet cables to each floor. On each floor each ethernet cable will be connected to a router, which will then distribute the internet. Second, daisy chaining routers together will not equally split the speed between them. However, connecting one splitter to another—also known as cascading splitters—can be tricky.
