

# How to read the network cable number in a network cabinet

## Overview

For the network cable connecting a hub and router, the label on the hub end should specify the numbers of the chassis and cabinet where the hub resides as well as the serial number on the hub. The goal isn't bureaucracy; it's clarity. With the right labeling system, you can trace any connection in seconds instead of hours, keep your documentation airtight, and make your infrastructure truly scalable. However, this represents less than 10% of the network cabling in this organisation. What is the ANSI/TIA-606-B Cable Labeling Standard?

The American National Standards Institute and Telecommunications Industry. Network cabinet cabling describes the structured connection and arrangement of all IT components in a server rack. Table 4-49 describes the content on both sides of the labels affixed to Ethernet cables.
