

Inner and outer door primary distribution box

Overview

The primary distribution box refers to the main distribution box, typically located in the distribution room. E-abel's dual-layer door power distribution cabinet (inner + outer door structure) is engineered to address these demands. By combining layered electrical protection, standardized DIN rail mounting, sealed enclosure construction, and deep customization capabilities, this solution supports modern. A distribution box is a key part of electrical systems in buildings. Inside, you'll find parts like circuit breakers and fuses that protect the system from problems like overloads and short circuits. It ensures that electricity flows. ●Stainless Steel Distribution Box with Inner-Outer Door is constructed by bending and welding SUS304 stainless steel plates, featuring an inner door design and a double-sloped top. It's literally the face of your electrical box. And the first thing to understand about it is simple: It's meant for you.
