

Interconnection of multiple data centers

Overview

Data center interconnect (DCI) is private network connectivity between multiple data center facilities that lets you treat geographically separated infrastructure as a unified environment. With interconnection services, data center facilities offer services where customers can connect between various facilities across. The term DCI (Data Center Interconnect) is relevant in all scenarios where different levels of connectivity are required between two or more data center locations in order to provide flexibility for deploying applications and resiliency schemes.
