

Length of shorting wire in distribution box

Overview

Minimum Wire Length: At least 6 inches of free conductor must be measured from the point where the wires enter the box. The required length of wire left inside an electrical box is a matter of safety and future maintenance, ensuring that devices can be installed and serviced without complication. This guide is designed to help electricians, DIY renovators, and construction professionals understand the minimum wire length requirements as per the National Electrical Code (NEC). Calculate proper wire gauge, voltage drop, and ampacity for safe electrical installations. The question is, how long should it be?
