

Light Sensor Amplifier Settings

Light Sensor Amplifier Settings

Sensor Setting Guide available in all major Asian and European languages. An essential support tool for personnel configuring sensors in any country.

Set the light to 100%. Measure the lux level at the reference point using a lux meter. Adjust the gain settings on the sensor to match the measured lux level. In some cases, lights may not provide a ...

Put the amplifier protection seals 4th and 5th amplifiers and between 8th and 9th amplifiers or change the communication protocol setting of 4th and 8th to OFF since interference prevention works from ...

Sensor Setting Guide available in all major Asian and European languages. An essential support tool for personnel configuring sensors in any country.

When using the unit in point-blank range, raising the power mode excessively may attenuate the received light intensity. In such a case, either lower the power mode or use the saturation Canceling ...

This function sets the reference condition to ".0" and correct conditions with the slightly higher light intensity to "100.0". This is effective when you wish to perform detection using the background as a ...

Press the Mode Key to complete initial settings. If these initial settings need to be changed, an initialization will need to be performed. See Keyence manual sec. 3-8 for instructions. Select whether ...

Page 55 - Setting Various Functions4 2-12IL-
EInstallation and Connection2 This chapter describes precautions when installing and connecting the IL Series.2-1 Mounting and Wiring the Senso

The 2420 Amplifier provides 15 discrete gain settings to accommodate a variety of full-scale light intensities, full-scale voltage ranges, and sensor types. This section shows how to determine the ...
