

Low-loss Customization Process for Reconfigurable Optical Add-Drop Multiplexers for Railway Communications

Low-loss Customization Process for Reconfigurable Optical Add-Dro

A S E S N Sudhakar, Dr.Banitamani Mallik, S.K.Sahu, Umakanta Misra 14377 - 14380 o o A Rule based Fuzzy Geometry Image Approach for Analyzing Spatial Ambiguity Measures ...

The design process often includes research into trends, user needs, and product safety, and requires the consideration of human factors, materials, technologies, and the production process. One ...

In this paper, we propose and demonstrate a 32×4 optical switch using high-index doped silica glass (HDSG) for ROADM applications.

In optical communication, a reconfigurable optical add-drop multiplexer (ROADM) is a form of optical add-drop multiplexer that adds the ability to remotely switch traffic from a wavelength-division ...

This approach will enable us to create a Reconfigurable Optical Add-Drop Multiplexer (ROADM) that significantly reduces signal crosstalk. To selectively add or drop a desired signal, an ...

A 96-channel silicon-based on-chip reconfigurable optical add-drop multiplexer (ROADM) is proposed and demonstrated for the first time to satisfy the demands in hybrid ...

Scribd is the world's largest social reading and publishing site.

In this paper, we propose a low-loss hybrid architecture for a ROADM subsystem that combines the best features of the latest available ROADM designs. A metro network testbed has ...

A reconfigurable optical add-drop multiplexer (ROADM) using special modal field redistribution is proposed and demonstrated to enable the selective access of any mode-/wavelength-channels.

Integration of interactive methods into the educational process for biological educational components in the conditions of online-learning in pharmaceutical higher education institutions.

In this paper, we report on a novel scheme of mode-division ROADM with mode-selective silicon photonic MEMS (micro-electromechanical system) switches.

decades, driving the development of high-speed, low-loss, and reliable optical communication networks - agg gratings, optical filters that modulate light by refracting

In this paper, we propose and demonstrate a 96-channel silicon-based on-chip ROADM for the first time to satisfy the demands in hybrid MDM-WDM-PDM systems. Here three modes, dual polarizations, ...

Network operators diversify service offerings and enhance network efficiency by leveraging bandwidth-variable transceivers and colorless flexible-grid reconfigurable optical add-drop ...

An approach for realizing low-power, high-port-count optical switching systems, such as OXCs, WXCs, and ROADMs is presented.
