

Must cable trays be run horizontally

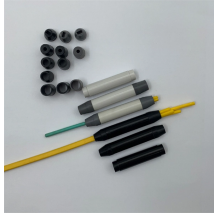

Overview

The NEC requires that cable trays must be supported by members at an interval specified by the cable tray manufacturer, but not more than 5 feet for horizontal runs to support the weight of the cables and other loads. The NEC has a requirement for ladder-type cable trays. Proper installation can significantly reduce electromagnetic interference, prevent fire hazards, and improve overall efficiency. A rung spacing of 6 to 9 inches (150 to 230 mm) is preferable when the cable tray is used for instrumentation and control applications that require. Prohibited Areas: Cable trays cannot be used in hoistways or enclosed spaces and must remain accessible. Grounding: Metallic trays can serve as equipment grounding conductors (EGC) if they meet NEC requirements.

Must cable trays be run horizontally

Cable tray is considered to be a system. It must provide continuous support for cables, and the electrical continuity of the cable tray system must be maintained.

Must is a modal verb. It is followed by the base form of a verb. You use must to indicate that you think it is very important or necessary for something to happen. You use must not or mustn't to indicate that ...

Cable securing: Cables must be secured within the tray at intervals not exceeding 3 meters (10 feet) in horizontal runs per 392.20 (A). In vertical runs, cables must be supported at ...

Something that is absolutely required or indispensable. Promptness on the job is a must. Comfortable boots are a must when going on a hike.
