

Not a major drawback of fiber optic communication

Overview

Because fiber strands transmit light rather than electrical currents, they are completely immune to electromagnetic interference from nearby power lines or heavy machinery. A fiber optic cable is formed by drawing glass or a special sort of plastic, which can transmit light from one end of the fiber to a special end. Twisted pair cables use current to transfer data. That mass of fiber optic cable is credited with the rise of India and China as major technological powers because it allows thousands of individual entrepreneurs to find or create employment for themselves serving clients in other countries thousands of miles away.
