

# Number of Ethernet and Fiber Ports on the Switch

## Overview

This Layer 2 managed gigabit Ethernet switch includes (20) 100/1000-Mbps SFP (Small Form-Factor Pluggable) fiber ports, (4) dual-media 100/1000-Mbps RJ45/SFP ports, and (4) 1/10-Gbps SFP+ fiber ports. Ethernet switch port types define the performance, scalability, and architecture of modern networks. Add a 10-Gbps fiber link when you expand your 100/1000-Mbps copper/fiber network. The SFP port is commonly found on Gigabit Ethernet switches and is primarily used for fiber optic device connections or for uplinking 1G switches to aggregation/core layer devices, providing higher-bandwidth links. You can add a compatible SFP transceiver module to the SFP port of Ethernet. (MENAFN - ForPressRelease) Newark, April 2026 - Versitron announces its 10-Port Unmanaged Switch (SKU: SG10208), a fiber-focused networking solution designed to support high-density optical connectivity across enterprise, industrial, and infrastructure environments. Copper ports are widely used in local area networks (LANs) due to their cost-effectiveness and ease of installation.
