

ODF rack inserted into fiber optic cable without removal

Overview

The ODF is a purpose-made rack designed to accommodate high density Feeder Panels or Splitter Panels used in FTTH PON networks. The rack can be made as a stand-alone solution, or it can be made as a 'side-by-side' system with integrated cable management in the middle. This complete guide explores everything you need to know about ODFs — from their structure, types, and key components, to installation best practices and modern design trends. Whether you're building a central office, data center, or FTTx distribution network, understanding the right ODF. Enter the Optical Distribution Frame (ODF)—a foundational component that serves as the “nerve center” for fiber optic management, enabling seamless connectivity, efficient maintenance, and scalable growth. Designed for reliability and ease of use, our rack-mount and wall-mount solutions provide the perfect environment for splicing, terminating, and managing your critical fiber optic connections.
