

## Preventing accidental removal of the Fiber Tail Cable

### Overview

When terminating optical fibers, use common sense, wear proper eye protection, work in an optimum environment (not in a cramped space) and keep the work area clean. Procedures 1) Protect vision 2) Never look into the end of a fiber to check if it is in operation. This can result in: Internet Outages: Users may experience a complete loss of internet access, affecting both residential and commercial users. Telecommunications. Cable routing refers to the strategic planning and implementation of pathways for fiber optic cables within a network infrastructure. Think of it as the equivalent of connecting the dots in a complex puzzle; without proper termination, the whole system can break down. If these fibers get into your eyes, they are especially difficult to wash. Introduction This Program provides supervision, employees and safety managers with general safety rules, task safety procedures and best techniques for installation of quality fiber optic cable systems (cable handling, splicing, pulling, terminating testing and trouble shooting tasks).
