

## Pulling optical cable across

### Overview

This helps keep fiber optic cables safe from harm and signal problems when you put them in. Try new methods like air blowing. Most fiber optic cables boast a pull strength of 100 - 200. Bending the cable too tightly can be done by pulling the cable at the wrong angle out of a duct or across a pulley that is too small. The. When deploying fiber links in data centers, LANs, or even in outside plant networks, fiber is pulled between equipment and spaces through pathways, cable managers, cable tray, risers, or conduit.
