

## Selection Guide for Passive Optical Networks OSFP for Field Operations

### Overview

This Guide is intended for use by OSFP, other DES and Caltrans personnel, local entities, design consultants and other authorities, agencies or disciplines involved in the preparation of projects that require OSFP oversight. The abbreviation OSFP represents Octal Small Form-factor Pluggable. However, it shows a deeper meaning that extends beyond its first impression. The OSFP MSA (Multi-Source Agreement) group developed this form factor to solve thermal and density problems. Enter OSFP (Octal Small Form Factor Pluggable) — an open standard designed to deliver scalable, thermally optimized, and high-density optical connectivity for hyperscale, cloud, and AI-driven environments. Unlike the backward-compatible QSFP-DD, OSFP introduces a slightly larger mechanical form to. As network speeds accelerate to 400G and 800G, the selection of appropriate optical transceivers becomes critical for ensuring optimal performance and interoperability. Extreme Networks optical transceivers provide robust solutions that address the complex technical requirements of modern. The Office of Special Funded Projects and Structure Local Assistance of the Division of Engineering Services has oversight responsibility for structure portions of special funded projects

that involve transportation related structures. The OSFP Management interface is described in a separate document: “Common Management Interface Specification.
