

# Several ground wires in the optical junction box

## Overview

Its genius lies in its dual functionality: it serves as a conventional ground wire (or shield wire) to protect the high-voltage conductors from lightning strikes, while simultaneously housing optical fibers in its core to provide a high-speed data path. This manual is formulated in accordance with IEEE 1138 - 2008 and IEEE 524 - 1992, etc. It is composed of AS wire, AA wire and stainless steel tube optical unit. The installation rules of OPGW are basically the same as the. The ADSS/OPGW Metal Junction Box, also known as a splicing box or Metal Joint Junction Box, is designed to house fiber core splices for outdoor intermediate optical cables. It connects trunk cables like OPGW to patch panels in control rooms. This conductor is fundamental for electrical safety, providing a safe route for fault current to travel when an issue occurs, such as a hot wire. one thread adapter when an adaptor is used. NOTE - wire lengths will vary depending o B and tighten screws;. I'm using metal box has two ground screws, can I wrap around one ground wire (from supply side) on one of ground screws then connect it to the outlet and connect another ground wire (or two wires ) going to the next box (es) on the secondary ground screw?

I know pig-tail method is probably better. Splicing of the ground wires in the junction box using a wire nut. - YouTube Splicing of the ground wires in the junction box using a wire nut.

## Several ground wires in the optical junction box

The junction box accommodates ADSS (All-Dielectric Self-Supporting) and OPGW (Optical Ground Wire) cables, with oval and round ports supporting various cable diameters from 6mm to 33mm.

The bending radius of optical cable during laying process should be effectively guaranteed to avoid "gold hooks" and avoid too much tension, abrasion and too many times of twists and turns.
