

The fiber optic cable and router cannot be bridged

Overview

Check the power and connection cables for the fiber modem and router. Verify the router's IP address and subnet mask settings are correct. It ceases its routing functions and focuses on its core job: converting the light-based signal from the fiber line into an electrical Ethernet signal. ➤. The fiber optic cable does not plug directly into a standard home router because the signal type must be translated. The fiber line terminates at the Optical Network Terminal (ONT), which is typically supplied and installed by the internet service provider.

The fiber optic cable and router cannot be bridged

This guide dives deep into Bridge Mode ONU, explaining how this simple setting can eliminate double NAT, reduce latency, and give you full control over your network.
