Overview

The system includes straight sections, fittings, and support hardware. The modern world relies heavily on electrical and communication cables that must be managed and supported across vast distances in commercial and industrial settings. A cable tray is an organized support structure designed to secure and route these insulated electrical cables. If you're planning a project, this will help you make faster, more practical decisions. Communication systems require organized routing for high-density, low-voltage. B manufactures its cable tray in a range of materials with a variety of finishes. The selection of material and finish is a function of the environment in which it is used in a wide range of environments, and easily formable (Appendices II and III).
