The method used to install a copper transceiver module is the same, except that the copper transceiver module connects to a network cable instead of optical fibers. Static electricity and optical port pollution have a great impact on optical module signal transmission. Static electricity will reduce the performance. Small Form-factor Pluggable modules (SFP module) are the workhorses of modern network connectivity, enabling flexible fiber optic or copper links between switches, routers, firewalls, and servers. However, you might need to refer to the datasheet or user manual of any new transceivers to familiarize yourself with their properties and the latching mechanism. What Should You Know Before Installing and Removing Modules?
