What type of cable should be used for the incoming line of the distribution box

Overview

As a general rule for cables used for service entrance: Use THHN/XHHW-2 for overhead or indoor service entrances in conduit. That cable running from your main service entrance to your distribution box isn't just another wire – it's the critical link that determines how safely and efficiently power flows through your entire building. Code Change Summary: New requirements were added for power distribution. Control and instrumentation cables are designed for lower voltages and lower currents—prioritizing signal integrity, shielding, and noise reduction over raw power capacity. The first factor to look at is AC (Alternating Current) vs.
